Adjustment Instructions:

Note: Part numbers in parenthesis (see Page 2)

Set-up: Adjustment is most easily accomplished with the QM-ETS-1 out of the compartment and in full upright position (as shipped).

1. Loosen 5/16-18 x 1" sq. bolts (11) on Hanging Angle Brackets (7). Adjust brackets until they rest flush against the blade-end of your tool. Re-tighten bolts.
2. Loosen 5/16-18 x .75" sq. bolts (15) on Short Channel (4). Adjust Short Channel up or down to accommodate height of your tool. Re-tighten bolts.
3. Loosen 5/16-18 x 1.25" sq. bolts on Hang Bracket (2). Slide in or out to accommodate size and shape of tool handle. For wider handles, reverse the Hang Brackets (see below). Re-tighten bolts.

Shown: QM-ETD-1

4. Adjust Rubber Strap (18) so that Strap Handle (17) grips tool handle tightly.

After bracket has been adjusted to fit desired tool, you may adjust tilt angle by removing 1/4"-20 x 1.5" hex bolts (8) and hardware on one side of the Base (6) and repositioning Long Channel (5). Re-tighten hardware via appropriate holes in Base after achieving desired tilt.

Mounting Instructions:

Mount at four points using 3/8" hardware (not included).
